INTRODUCTION

The British Columbia geoscience database is made available largely through a variety of reports, maps and computer data generated by the Geological Survey Branch. The *Ministry of Energy, Mines and Petroleum Resources* (1978-) and its predecessors the *Department of Mines* (1874-1960), the *Department of Mines and Petroleum Resources* (1960-1976), and the *Ministry of Mines and Petroleum Resources* (1976-1978) have issued publications since 1874 but the character of these publications has varied over the years in response to changing demands from clients of government.

This publication provides a listing of 2099 geoscience publications sorted by National Topographic System (NTS) location within the Province of British Columbia and, alphabetically by author. It is a comprehensive database containing references up to March 1991. The index includes all Bulletins, Papers, Open Files, maps and Information Circulars as well as individual article citations from the compilation volumes *Geological Fieldwork*, *Exploration in British Columbia*, *Geology, Exploration and Mining in British Columbia* and *Geology in British Columbia*.

Although this is an extensive reference list of publications it does not include articles from the series of *Annual Reports* of the Ministry issued from 1876 to 1969. In addition articles from *Geology, Exploration and Mining in British Columbia* (1969-1974), *Geology in British Columbia* (1975-1981) and *Exploration in British Columbia* (1975-1989) were cataloged selectively and include only those articles containing extensive geological descriptions and/or detailed geological maps. Users of this database should also be aware that it does not contain articles published by Ministry staff in journals or other publications external to government, nor does it reflect much of the excellent research carried out and published by mineral industry and university researchers. It is anticipated that some of these information gaps will be filled as the database is updated.

It is highly recommended that anyone using this index should also consult the *Assessment Report Index* and Information Circular 1991-4 (or revisions) - *A Catalog of Reports, Maps and Geoscience Databases,* issued by the B.C. Geological Survey Branch.

Corrections and updates to the data contained herein are welcomed and will be incorporated in the next revision of the database.

Technical Notes

This database contains 2099 citations listed first by National Topographic System (NTS) location and then by primary author. There are no duplicate citations within each of these listings.

NTS INDEX

References are grouped in order of 1:250 000-scale NTS map sheets and are then sorted alphabetically by author(s) and year of publication. Users may locate areas of interest by using the index map on the first page of this section.

References which cover more than one map sheet appear only under the primary NTS map area as identified in the database. Each reference may have up to four NTS sheets identified but many references may contain data on adjoining map areas.

The final section of the NTS index is a general research section. It includes research on topics not well related to specific map areas or, geoscience research dealing with all or large portions of the province. This section also contains references of interest on Ministry regulations, engineering, mine safety, mineral economics and computer databases and applications.

AUTHOR INDEX

References are listed alphabetically by primary author and initials then by subsequent authors, in the order cited on the original manuscript, and finally by year of publication. The user is cautioned that many authors have used variations of their initials in different publications. This database reflects the names and initials as they appear in the original publication. The database may contain up to nine co-authors for a given reference.

KEYWORDS

The first keyword listed identifies the primary focus of the reference. Subsequent keywords, to a maximum of 16, are not entered in any defined order but serve only to identify some of the major topics addressed in the publication. The selection of keywords is highly subjective and may not reflect the full scope of the publication.

PUBLISHING AGENCY

All references listed in this publication are the products of the British Columbia Ministry of Energy, Mines and Petroleum Resources or predecessor agencies. For administrative simplicity all publications are identified as products of the Ministry under its current name, that is, Ministry of Energy, Mines and Petroleum Resources. Early publications are products of the Ministry and tend to reflect diverse topics including engineering, mineral markets, health & safety, *etc*. More recent publications are primarily those of the Geological Survey Branch and tend to focus on geoscience research.
